

From DevOps to DevSecOps: Building Secure CI/CD Pipelines

01 - 03 December, 2025

Join our DevSecOps Workshop and experience how development, security, and operations come together! Gain practical skills in integrating security checks, strengthening CI/CD pipelines, and adopting the shift-left approach to prevent vulnerabilities early in the process.

3 DAYS DEVSECOPS HANDS-ON WORKSHOP

DAY 1 DevOps & CI/CD Foundations

- Master the Building Blocks of Modern DevOps and CI/CD
- Workflows Understand DevOps vs DevSecOps through real-world insights
- Get hands-on: Build your first CI/CD pipeline from code to commit.

DAY 2 CI/CD Pipelines & Security Integration

- Design and Automate End-to-End CI/CD Workflows Using GitLab & Jenkins
- Visualize builds, monitor jobs, and master GitLab dashboards for real-time insight
- Integrate code quality checks and basic security scans to keep pipelines resilient.

DAY 3 DevSecOps in Action

- Bring It All Together — The Complete DevSecOps Pipeline
- Integrate SAST, DAST, and container scans into your CI/CD flow
- Deliver resilient, secure software with automated security gates and reports.

About Speaker

With over 8 years of experience, **Muhammad Sajid** works in Cybersecurity, DevOps, DevSecOps and Big Data. He leads projects that focus on secure automation and data-based systems, bringing together development, operations, and security to build strong digital platforms.

Registration Deadline

22 November, 2025

Registration Fee

- Students 4000 PKR
- Professionals 10000 PKR
